Mount Elara Medical Centre

88 Jalan Elara, 50450 Kuala Lumpur, Malaysia

DISCHARGE SUMMARY

Patient	**Aisha binti Rahman**	MRN	**MEMC-0731558**
Date of birth	**17-Sep-1968**	Sex	**Female**
Admitted	**03-Feb-2024**	Discharged	**09-Feb-2024**
Ward	**Ward 7B (Medical)**		

DIAGNOSES

Principal: Lobar pneumonia, right lower lobe (J18.1)

Secondary:

- Type 2 diabetes mellitus without complications (E11.9)
- Essential hypertension (I10)

PROCEDURES PERFORMED

- Chest radiograph, PA and lateral views
- Diagnostic thoracentesis, right side

HOSPITAL COURSE

Admitted with 4 days of fever, productive cough and right-sided pleuritic chest pain. Chest radiograph showed right lower lobe consolidation with a small effusion. Treated with IV ceftriaxone and azithromycin; diagnostic thoracentesis confirmed a simple parapneumonic effusion. Afebrile from day 3; switched to oral antibiotics on day 5.

DISCHARGE INSTRUCTIONS

1. Complete oral amoxicillin-clavulanate 625 mg three times daily for 5 more days.
2. Check blood glucose twice daily and continue metformin 500 mg twice daily.
3. Return to the Emergency Department if fever above 38.5°C, shortness of breath or chest pain.
4. Follow up at the Respiratory Clinic in 2 weeks with a repeat chest X-ray.
